SENIOR ENTERPRISE ARCHITECT

BLOCKCHAIN | EOS | SOLANA | AWS | AZURE | SERVERLESS | JAVA | SPRING BOOT |MICROSERVICES | SPRING SECURITY | JWT | ANGULAR-8 |MONGO ATLAS | CI/CD TOOLS |KUBERNETES

EXECUTIVE SUMMARY

- Principal-level Architect with 15+ years of experience building large-scale distributed systems across fintech, SaaS, ecommerce and enterprise domains.
- Designed multi-tenant SaaS platforms serving 350+ enterprise clients per region.
- Architected high-throughput systems processing 50K+ messages per minute and 1M+ transactions per day.
- Led engineering teams across backend, frontend, DevOps and cloud architecture from RFP to production scale.
- Strong hands-on expertise in microservices, event-driven architecture, serverless computing and cloud-native design.

CORE COMPETENCIES

- Architecture: Microservices, Event-Driven Architecture, Domain-Driven Design, Saga Pattern, Multi-Tenant SaaS.
- Cloud Platforms: AWS (Lambda, SNS, SQS, Route 53, S3, Cognito, Aurora, SES, EKS, ALB, VPC, Subnet, DynamoDB, Document DB, EC2, CloudWatch, API Gateway), Azure (VM, Functions, AKS, Blob Storage, Cosmos DB, Azure DNS, VNet, Subnet, Application Gateway, Service Bus Queue, Notification Hub, Active Directory).
- Backend: Java (8–17), Spring Boot, Spring Security, JWT, NestJs.
- Frontend: React, Next.js, Angular, Node.js.
- Data & Streaming: PostgreSQL, MongoDB, MongoDB Atlas, DynamoDB, Snowflake, Kafka, Confluent.
- DevOps & Infra: Docker, Kubernetes, Terraform, CloudFormation, GitHub Actions, Jenkins, Azure DevOps.
- DApps: Blockchain, Solana, EOS, Corda.
- Code Monitoring/Quality Tools: AWS CloudWatch, Prometheus & Grafana Dashboards, ELK, Swagger, SonarQube, Veracode.

Pure-Software	21 st August 2017 till date
Markit (S&P Global)	10 th June 2014 till 31 st July 2017
Fidelity	4 th November 2013 till 4 th June 2014
Accenture	27 th July 2010 till 31st October2013

Project	Cappitech (1 st Jan 2025 till date)
Client	S&P Global
Area of work	Principal Architect

Description	Green field project to build SaaS reconciliation platform for different datasets at scale
Responsibilities	• I was involved from RFP stage, building architecture design, finalizing tech roles and hiring • Build reconciliation platform for datasets coming from different sources • Designed multi-tenant architecture platform which can be used by 350+ clients per region • Designed distributed reconciliation engine processing 50K+ messages/min and 200+ daily jobs (1GB each) using AWS SQS-based Saga choreography • Pairing of records must happen from both datasets at scale • System was designed using saga choreography design pattern leveraging SQS for async communication • At the end of each recon, breaks are generated for each mismatch of fields • Breaks are converted into tickets and ingested into inhouse ticket management system • Auto closure of breaks happens on next recon run once the breaks are fixed at source
Solution Environment	AWS, EKS, SQS, PostgreSQL with JSONB, React, Java, Docker
Technology	• Build backend apis leveraging java • React was used for building front end • Backend microservices architecture was built using Java 17 • Api's were deployed on EKS • GitHub is used for CI/CD pipelines

PURESOFTWARE

Project	Prop-X (1st August 2024 till 28th Feb 2025)
Area of work	Solution Architect
Description	Green field project to build online platform to transact properties directly between buyers & sellers
Responsibilities	• Design & implement web portal which can be leveraged by buyers and vetted sellers for selling/purchase of residential/commercial properties in UAE. • I was involved from RFP till development stage • Designed e2e architecture and setup team to deliver • Responsible for Azure Devops
Solution Environment	Azure, AKS, Cosmos DB, Blob Storage
Technology	• Build backend apis leveraging java • Next.js was used for building front end • Api's were deployed on AKS • Bitbucket is used for CI/CD pipelines

PURESOFTWARE

Project	UNTIL (1st June 2024 till 15th April 2025)
Area of work	Solution Architect
Description	Build web portal for wellness industry to book spaces. It is on model of co-working space for wellness industry
Responsibilities	• Build backend apis leveraging Nodejs • Next.js was used for building front end • Api's were deployed on lambda • Git-Actions is used for CI/CD pipelines
Solution Environment	AWS, Lambda
Technology	Node.js, Next.js

PURESOFTWARE

Project	THG (1st May 2023 till 31st May 2024)
Area of work	Solution Architect
Description	Saas e-commerce platform
Responsibilities	• I handled a team of 42 people working in various verticals • We built Ingenuity product integration layers • Helped in cloud migration from EC2 to EKS • Helped client go-live for Matlan ecommerce platform
Solution Environment	AWS, Springboot, Keycloak, Java, ReactJs
Technology	Java 17, AWS

PURESOFTWARE

Project	JAPFA (1st May 2023 till 31st October 2024)
Area of work	Solution Architect
Description	Build end to end ecommerce platform for raw products to be sold on D2C platform. Model like Licious India.
Responsibilities	• Build Android/IOS mobile App for D2C customers. • Implement ecommerce website complimentary to mobile apps for web traffic. • Build Backoffice operations platform for managing inventory, invoicing, catalogue uploading etc. • Built cloud native environment leveraging AWS cloud. • Implement backend microservice architecture with Spring Boot & Java.
Solution Environment	AWS, Springboot, Keycloak, Flutter, ReactJs
Technology	Java 17, AWS

PURESOFTWARE

Project	HUB (1st September 2022 till 30th April 2023)
Area of work	Solution Architect
Description	Build post trade settlement application using event driven design to minimize latency to milli-seconds
Responsibilities	• Integrate reference data into client environment from Bloomberg.

	• Data ingestion pipeline was built using Confluent (SAAS offering of Kafka). • Kafka connectors helped ingest data from topics into snowflake, postgres. • Data scrubbing engine was built to massage the data in HUB compliant format. • Integration with Matching platforms like Tirana for settlement of trade. • Leveraged Palo Alto networks for Security.
Solution Environment	Kafka, KSql, Java 17, Azure, Confluent, Palo Alto Networks
Technology	Java 17, Azure

PURESOFTWARE

Project	Jumpstart (1st Feb 2022 till 31st August 2022)
Client	Encore
Area of work	Solution Architect
Description	Worked as a solution architect, for designing headless application with serverless features
Responsibilities	• Build microservices for marketing letters. • Transaction volume was more than 1 million per day. • Designed system using Cloud native AWS services likes S3, SQS, SNS, Lambda. • It's a headless system with async communication from outside world.
Solution Environment	Java, Spring, AWS, Lambda for serverless
Technology	Java

PURESOFTWARE

Project	Arttha (1st Oct 2021 till 31st Jan 2022)
Client	In House Fintech Product
Area of work	Solution Architect
Description	Worked as a solution architect, for designing mobile app in flutter
Responsibilities	• Develop lending page for loan app. • App must support IOS/Android mobiles. • It was a scratch development project. • Flutter was taken as the technology stack to utilize its platform agnostic features and mobile hardening out of the box support.
Solution Environment	IOS, Android mobile app
Technology	Flutter

PURESOFTWARE

Project	Blacksmith (1st Jan 2021 till 30th September 2021)
Client	Bolttech (Malaysia)
Area of work	TechLead

Description	I was full stack tech lead responsible for development and integration of front end and backend
Responsibilities	• Work on next generation tech stack to speed up time to market for BAU teams. • POC & R&D on tech stack like: ○ Blockchain ○ Smart TV App ○ Zoom Integration App for Sales Agent ○ Product Foundry Rule Engine Automation ○ Cypress integration for automation of test suite ○ Corda permissioned blockchain ○ EOS Delegated proof of stake POC ○ Solana
Solution Environment	Eos, Corda Dapps, Tizen OS, Terraform, Zoom App integration with Spring Boot, Java 8
Technology	Blockchain, Tizen OS for smart TV

PURESOFTWARE

Project	CRMZ (21st Jan 2019 till 31st Dec 2020)
Client	Amtrust Mobile Solutions/Bolttech (Malaysia)
Area of work	TechLead
Description	I was full stack tech lead responsible for development and integration of front end and backend
Responsibilities	• Worked on a project from scratch. • First developer hired for project. • CRMZ product first ever line of code was written by me. • Designing the application workflow. • Implemented multi-tenant architecture. • Individually helped Amtrust establish a team, setup agile processes. • Developed modules like policy and Identity. • Did front end and Backend coding. • Had a strong relationship with client as I was actively involved in requirement gathering. • Played scrum-master role as well. • Involved in dev-ops as well for production deployment.
Solution Environment	Springboot-2, Microservices, Spring-Security, JWT, Angular-8, Maven, Mongo-DB, AWS (EC2, API-Gateway, Lambda Services, S3, Route 53, SNS, SQS, COGNITO), Jenkins.
Technology	Jdk-1.8, Spring-Boot 2, Spring Security, Angular-8.

PURESOFTWARE

Project	Power-Curve (21st August 2017 31st December 2018)
Client	Experian (Malaysia)
Area of work	Tech Lead
Description	Worked as tech lead in maintaining a team of 14 resources (9 developers and 5 QA)
Responsibilities	• Developed and followed agile project management plan (Agile Ceremonies). • Facilitated build requirements log (product backlog) with cost estimates and priority. • Conducted Scrum Daily stand up, Product backlog, Sprint

	- Planning, Sprint Review & Sprint Retrospective meetings. - Measuring team performance using matrix like 'Velocity' and 'Focus factor'. - Involved in technical design analysis and estimation of new feature development.
Solution Environment	J2ee with jdk-1.8, Oracle SQL, Microsoft SQL
Technology	Java, Spring, Hibernate, Semaphore for concurrency, Countdown-Latch.

MARKIT

Project	IMSecurities (30th August 2015-31st July 2017)
Client	Nordea
Area of work	Worked on Restful webservice
Description	Developed 17th webservices for various IMSecurities product functionalities like casearch, CreateElection, TransactionCustodyRetailSearch, FifoWebservice subposition transfer.
Responsibilities	I was involved in end-to-end development of 17 different webservices in both GET and PUT request. For triggering Put webservice we used rest-client from Firefox.
Solution Environment	J2ee, Oracle SQL
Technology	Java

MARKIT

Project	IMActions (1st Jan 2015- 30th August 2015)
Client	UBS, Nordea, GIC, NTS, CITI
Area of work	Worked on Gwt, hibernate and spring.
Description	IMActions is an application that is used for scrubbing and processing of corporate actions.
Responsibilities	I was involved in end-to-end development of various CR's
Solution Environment	J2ee, Oracle SQL
Technology	Java

MARKIT

Project	IMConnecting (10th June 2014- 31st December 2014)
Client	Singapore stock exchange
Area of work	Worked on Gwt, hibernate and spring.
Description	IMConnecting is a platform to announce corporate actions by issuer which can be seen and further elected by investors.
Responsibilities	I was involved in end-to-end development of various corporate action templates like DVOP, Rights.
Solution Environment	J2ee, GWT, Hibernate
Technology	Java

FIDELITY

Project	PlanViewer (November 2013 - 9th June 2014)
Client	Fidelity
Area of work	Worked on back-end technology like struts
Description	Fidelity is a finance company. Most of its mutual fund's business is in UK. PlanViewer is one of the clients supported applications directly used by clients in UK.
Responsibilities	I was involved in FATCA, one of the regulatory projects of fidelity. I

	was directly involved in struts back-end coding.
Solution Environment	J2EE, Struts
Technology	Java

ACCENTURE

Project	New York City-HHS Accelerator (10th January 2013 - 30th September 2013)
Client	New York City (Government Project)
Area of Work	Portal & Portlet's
Description	It's a government project. New-York mayor wants a publicly accessible portal, where external providers can bid for various public-service related schemes. Once a provider is finalized for a specific scheme, the provider is entitled to the designated provider for a specific duration. - To build this application we used Spring MVC framework. Portal and Portlets were used to build the application. - This application will be used by multiple agencies and its associated providers to various public services. - My role was to develop Portlets enabled with spring-mvc architecture. - From the controller we hit transaction to call a specific service for a given functionality. - To access the database from service layer Dao classes were made. - Oracle-SQL was used as the database for all DDL's & DML's.
Responsibilities	- Developing J2EE functionalities, with Spring-MVC framework. - Testing of all the new functionalities to nullify client-side bug. - Delivering all the required CR'S on target dates. - Once the built was over, resolving all the SIT bugs to deliver a bug free product to the client. - Direct client interaction to guide them regarding all the new changes through meetings or emails.
Initiatives/Contribution	Developed a reusable code using Spring-MVC.
Solution Environment	J2EE, Spring-MVC, JSP, JQuery: Ajax, Portals.
Technology	Java

ACCENTURE

Project	Areva development and maintenance (1st March 2012 - 9th January 2013)
Area of work	Worked extensively on web
Description	- Areva client is one of the largest manufacturers of transformers and electrical appliances in the world. - They have about 1200 applications that are supported by Accenture in JAVA all designed in a modular way. - Some of the critical client-based applications are Project monthly report (PMR), CCHS, B-Budget, etc.
Responsibilities	- Developing JavaScript design elements for the client requirements. - Testing of all the new functionalities to nullify client-side bug. - Delivering all the required CR'S on target dates. - Resolving tickets that came in my queue on or before the breach-date. - Direct client interaction to guide them regarding all the new changes through meetings or emails.
Solution Environment	J2EE, JSP, MVC
Technology	Java

ACCENTURE

Project	Henkel SAM-Enhancements and Maintenance (1st October 2010 - 28th Feb 2012)
Area of Work	Worked Extensively on Client-Side Developments
Description	The project is aimed at delivering business solutions with speed & innovation, reliability & effectiveness by providing a high impact Middleware & Backend Solutions inclusive of JAVA & .NET requirements. - This company adopted JAVA as a technology to make its internal users integrate all information in a single place. - Henkel employees used the entire database that supported JAVA client and web functionalities.

	• My role was to develop new requirements for the user in JavaScript. • JAVA was responsible for gathering data from all the users regarding different applications uploaded on the Henkel servers from where it was further uploaded into SAP.
Responsibilities	• Developing JavaScript design elements for the client requirements. • Testing of all the new functionalities to nullify client-side bug. • Delivering all the required CR'S on target dates. • Resolving tickets that came in my queue on or before the breach-date. • Direct client interaction to guide them regarding all the new changes through meetings or calls.
Initiatives/Contribution	• Developed a reusable code in Java Script to compare field data in multiple documents at once. • Documented solutions of multiple issues for future reference. • Delivered KT to new team-members.
Solution Environment	J2EE,JavaScript,Scriptlets.
Technology	Java

EDUCATIONAL CREDENTIALS

B Tech from Thapar University, Patiala (2010)
